

# BABBLE BOOT CAMP

NIH-Funded Research Study - Looking for Participants Now

## Can speech and language disorders be prevented?

### Who?

- Babies with **CLASSIC GALACTOSEMIA**, 2 to 4 months at the start of the study
- Families anywhere in the world if English is their main language

### What?

- Treatment study that runs until the child turns 2 years, with follow-up testing at 3 and 4 years
- Online - can be done right in your own home

### How do we measure progress? Close monitoring:

- Monthly: Sound recordings with a high-tech recorder that we provide
- Every three months: Checklists and questionnaires
- At age 2: A local speech pathologist will test your child's speech and language and again at ages 3 and 4

### Cost? None!

- **You get paid!** Families receive \$100 when the child completes testing at age 2, and \$150 at the last test session. Parents can receive test results.

**Participation is voluntary. All families are enrolled in the close monitoring part of the study. Families are randomly assigned to participate or not participate in the online sessions in addition to the close monitoring.**

**Questions? Interested?** Contact **Dr. Beate Peter** or **Dr. Nancy Potter** at [Babblebootcamp@asu.edu](mailto:Babblebootcamp@asu.edu) or call (206) 713-5839.

**Funding: R01HD098253**
