

RESEARCH PARTICIPANTS NEEDED

Researchers at the University of Texas at Arlington and Marquette University are seeking research participants for a unique study on the prevalence of Developmental Coordination Disorder (DCD) characteristics in children with Childhood Apraxia of Speech (CAS) in the United States.

CRITERIA:

- Between 3-10 years of age, referred with a CAS diagnosis
- English as primary language,
- No confounding diagnosis (e.g., ASD or other disorders that exclude DCD),
- No vision or hearing impairment
- No other indication of inability to participate

THIS STUDY INCLUDES:

- Phase 1: Virtual speech-language testing
- Phase 2: In-person testing – Motor abilities

The study aims to investigate characteristics of DCD in children diagnosed with CAS. This is important because it can help with early identification and intervention for motor problems in CAS.
