

DOES YOUR CHILD HAVE APRAxia?

DYNAMIC

WHAT IS INVOLVED?

- A 15-minute phone interview
- A speech pathology assessment*
- 18 Dynamic Therapy treatment sessions conducted by a qualified speech pathologist**
- Collection of your child's speech data from their regular speech pathologist
- Three probe sessions (a \$20 gratuity for each session you attend)
- Subsidised parking***

* 120-180 minute assessment over 1-2 sessions

** If your child is randomly allocated to the treatment group

*** We will provide parking reimbursements (up to \$20) for each clinic visit

WHO CAN TAKE PART?

Children who:

- Have Childhood Apraxia of Speech
- Are 3;0 – 7;11 years old
- Have normal/adjusted-normal vision and hearing
- Speak English as their primary language
- Have no diagnosis of Autism or Global Developmental Delay
- Have no oral or facial structural issues

Children with Childhood Apraxia of Speech (CAS) have severe speech difficulties. This can have a lasting impact on their academic and literacy skills, social development and employment outcomes.

We want to know if Dynamic Therapy is an effective treatment for children with CAS.

WHAT WILL I GAIN FROM THIS STUDY?

- A speech pathology assessment and progress report
- Eighteen free sessions of Dynamic Therapy[^]
- Free coaching for your speech therapist in Dynamic Therapy

[^] if your child is randomly allocated to the experimental treatment group only
